

ProxyToggle

ProxyToggle is a Windows tray application for toggling system proxy settings. It provides quick access to enable/disable proxy, edit proxy settings, and runs in the background with a tray icon that reflects the current proxy state.

Going into settings was to annoying to do every time, and didnt care for keyboard shortcuts like maybe autohotkey so I made this, because proxy in the office was annoying,(I tried autodetect, was very unreliable)

Features

- Toggle system proxy on/off from the tray
- Edit proxy settings
- Starts automatically with Windows

Installation (Recommended)

- download and run the ProxyToggleSetup.exe

Compile and Run from Source

1. Install [.NET 8 SDK](#).
2. Open a terminal in the `source` folder.
3. Run:

```
//inside source  
dotnet run
```

4. The app will launch and appear in your system tray.
